

# The Future of Gas II

## Part of the Safety Excellence in Energy Series

IET London,  
Savoy Place  
4-5<sup>th</sup> February 2019

In partnership with

### About the Event

The recently issued IPCC special report “Global Warming of 1.5 degrees” calls the global community to arms to turn urgency into action in reducing carbon dioxide emissions. This urgency reinforces the importance of the projects underway in the UK to investigate decarbonising heat, and with this in mind, HSE is pleased to announce the second annual Future of Gas Event (Future of Gas II) as part of the Safety Excellence in Energy Series.

Following on from last year’s event, this conference will bring together a high calibre of speakers presenting their views on how decarbonisation can really happen in the UK and the importance of future of the gas system to achieve this. We will have representation from industry, academia, policy and technology covering the full spectrum of opportunities and challenges. New projects will be discussed and updates, new learning and developments from current projects looking at partial and full decarbonisation of the gas supply will be showcased.

In addition, we will bring insights from the transport sector and international views on the future of gas on a global level. We will also touch upon the role of CCUS as part of a future energy system.

*We hope that you can join us for another fantastic event!*

### Benefits of Attending:

- Hear the latest thinking, results and developments from keynote speakers within industry and government
- Learn about key challenges to the sector and how the energy sector more broadly is preparing to meet them
- Understand the importance and challenges of technologies to partially and fully replace natural gas in the grid
- Learn about the increasing diversity and complexity of the gas system and the steps being taken to understand, control and regulate it
- Engage with, and learn from, others in the energy sector who are facing these challenges

### Who Should Attend:

- Directors of gas suppliers, distributors, end users, equipment manufacturers and researchers
- Energy sector representatives responsible for innovation, R&D, health and safety, sustainability and green technologies
- Academia and consultants
- Risk management professionals
- Process safety engineers
- Senior Gas Engineers who will be affected by the impact of changes in the energy sector

### Sponsorship and Exhibition Opportunities

We have various **sponsorship opportunities** available to suit organisations of different sizes and budgets. Our events provide an excellent networking opportunity and can offer you a targeted platform to raise your organisation’s profile and promote products and services to industry decision-makers.

#### Location

IET London, Savoy Place,  
2 Savoy Place, WC2R 0BL, London

### Conference Fee

**£495 Early Bird offer**  
**available until 6 December 2018**

*From 7 December 2018 full price of  
£575 will apply*
