

## Safety Climate Tool Manufacturing Sector Benchmarking Example

This document provides [Your Organisation's] Safety Climate Tool Scores benchmarked against the manufacturing sector's average scores across the 8 factors of the SCT.

HSL's manufacturing benchmark dataset is based on returns from over 6700 individuals. The companies included in the benchmarking data set range from organisations with less than 100 employees to those with over 1000. The data includes a range of manufacturing activities, for example the production of motor vehicles, glass, beverages and plastic pipe work. The dataset reflects data collected upto January 2014.

### Factor 1 – Organisational Commitment (Only factor 1 shown for illustrative purposes)

The following chart shows [Your Organisation's] SCT score for Organisational Commitment compared with HSL's Manufacturing Benchmark data set (the points in this example are for illustrative purposes and do not reflect the actual sector benchmark).

#### Result (for illustrative purposes only):

**High** - your result [organisations score] is above HSL's manufacturing's average benchmark score of [average benchmark score]. You are performing above average, and efforts should be made to maintain this standard.

### Overview of your 8 Factors SCT Scores

The following chart shows the highest, lowest and average SCT scores across the manufacturing sector in relation to [Your Organisation's] SCT scores (the points in this example are for illustrative purposes and do not reflect the actual sector benchmark).
